

## Course Overview:

Lower revenues due to lower commodity prices have placed equipment life-cycle costs under the management spotlight like never before. Maintainers are faced with the challenge to deliver the same levels of equipment safety, reliability and availability with smaller budgets. This Maintenance Engineering training seminar on Maintenance & Reliability Best Practices introduces the practical tools and practices that organizations need to adopt to drive down their equipment life-cycle costs in practical ways. This Maintenance Engineering training seminar emphasizes the most effective strategies, policies, tactics and practices that are needed to ensure the reliability, integrity and durability of the physical assets through their life-cycle.

## Course Objective:

At the end of this training seminar, you will learn to:

- Understand the concepts of costs, capital, profit and ROI
- Understand the cost impact of unanticipated failure
- Apply proactive policies to reduce future maintenance costs
- Structure and analyse failure data to reduce repetitive failures
- Identify root causes of unanticipated failure costs
- Reduce resource costs through efficient work management practices

## Course Outline:

### Equipment Life-cycle Cost Introduction

- Definitions of Reliability, Maintenance & Asset Management
- The Concept of Costs, Capital, Profits and Return On Investment
- The Asset Healthcare Model
- Key Areas of Asset Management
- Open Discussion Sessions

### Cost Factors and Causes

- The Real Cost of Unanticipated Failure
- Asset Performance Standards
- The Forms of Asset Failure and Degradation
- The Causes and Nature of Asset Failure and Degradation
- The Effects, Cost and Risks of Asset Degradation

### Breaking the Cycle of Degradation and Costs

- Programmed Maintenance
- Programmed Maintenance Intervals
- Condition-based Maintenance Intervals
- Implementing Optimised PM Programs
- Optimizing Spares to Support the Maintenance Program

### Cost Reduction through Defect Elimination

- Failure Data Collection and Analysis
- The Impact of Chronic Failures vs. Intermittent Failures
- Focus Improvement through Pareto Analysis
- Quantify losses in Life Cycle Terms
- Rigorous Root Cause Analysis Techniques
- Discussion of Software and Templates to Support Analysis

Work Management converts Strategy to Practice

## Training Language:

English

## Training Methodology:

This Maintenance Engineering training seminar on Maintenance & Reliability Best Practices is delivered by means of a combination of instructor-led topic areas and class discussions. This training course is further enhanced by the use of case studies, examples and practical exercises that are pre-loaded onto a laptop for each delegate. The templates, case studies, examples and exercises are subsequently available to each delegate after the seminar as a reference for further study, research or practice. This ensures a high level of knowledge and skill retention.

## Venue | Date | Fees

Khobar | 28-04-2024 | 10,350 SAR  
Riyadh | 23-06-2024 | 10,350 SAR  
Khobar | 04-08-2024 | 10,350 SAR  
Riyadh | 15-09-2024 | 10,350 SAR  
Khobar | 03-11-2024 | 10,350 SAR  
Riyadh | 15-12-2024 | 10,350 SAR

- Work Identification and Defect Reporting
- The Importance of Backlog
- Planning for Quality and Reliability
- Capacity Planning
- Scheduling for Efficiency
- Work Logistics and Preparation
- Checklists and Practical Aspects Work Quality Control
- Final Discussion and Evaluation

### Who Should Attend:

It is highly recommended that maintenance, reliability, engineering and technical support staff including leadership and management to attend this Maintenance Engineering training seminar. Also, including:

- Planners
- Supervisors
- Engineers
- Reliability Engineers
- Maintenance Team Leaders and Managers
- Operations Team Leaders and Managers
